

TIP SHEET

Brunswick City Schools - Tech Integration Planner
An explanation for using the BSC Tech Integration Planner

Q: How do you eat an elephant? A: One bite at a time.

Integrating technology into instruction is like that – best accomplished one bite at a time, alongside work you’re already doing.

This “Tech Integration Planner” is designed to help you break your tech integration efforts into manageable bites.

Tips

1. Focus on one tech tool at a time.
2. Focus on one integration strategy at a time.
3. Implement in only one stage of your lesson.
4. Reuse the same tool in different lesson stages.
5. Break complex tools (e.g., Moodle) into modules and implement one module at a time.
6. Add new tools/modules to various stages of your lesson as you become increasingly skilled and confident.

Extra Idea:

1. List all your new tools and integration ideas on one “master tech integration planner.” Use it to reflect on and manage your new skills for future lesson planning.
